

I bought this system to use at my workplace, where there are only two air broadcast stations available, neither of which offer the music or information that I would like to have. Now that I have purchased it, I rely on satellite radio. I doubt I am alone in many areas of the country where, due to geography or remote locations, we do rely on satellite radio almost exclusively. This is something that fulfills the needs and wishes of many people. It is unfortunate for the terrestrial broadcasters that they are unable to provide the appropriate technology to fulfill these needs, but technology has marched on. There is nothing about satellite radio that is a detriment to the general public, in fact the opposite is true, it is a service to the general public. Please reject the NAB's Petition 04-160. Thank you.
